

First project

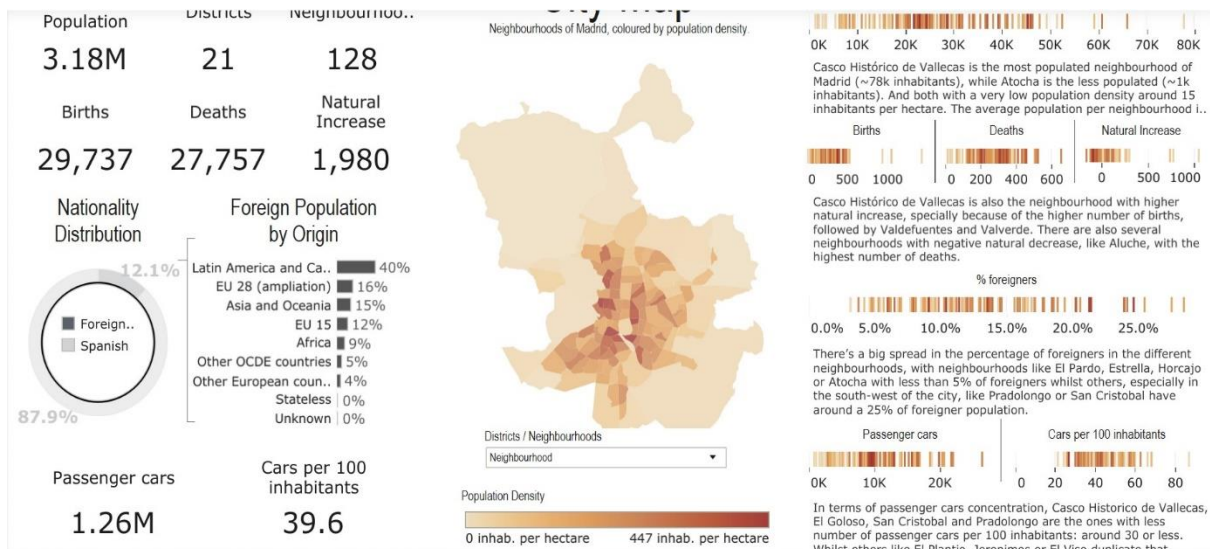

Name/ Adel Mohammed Alawad

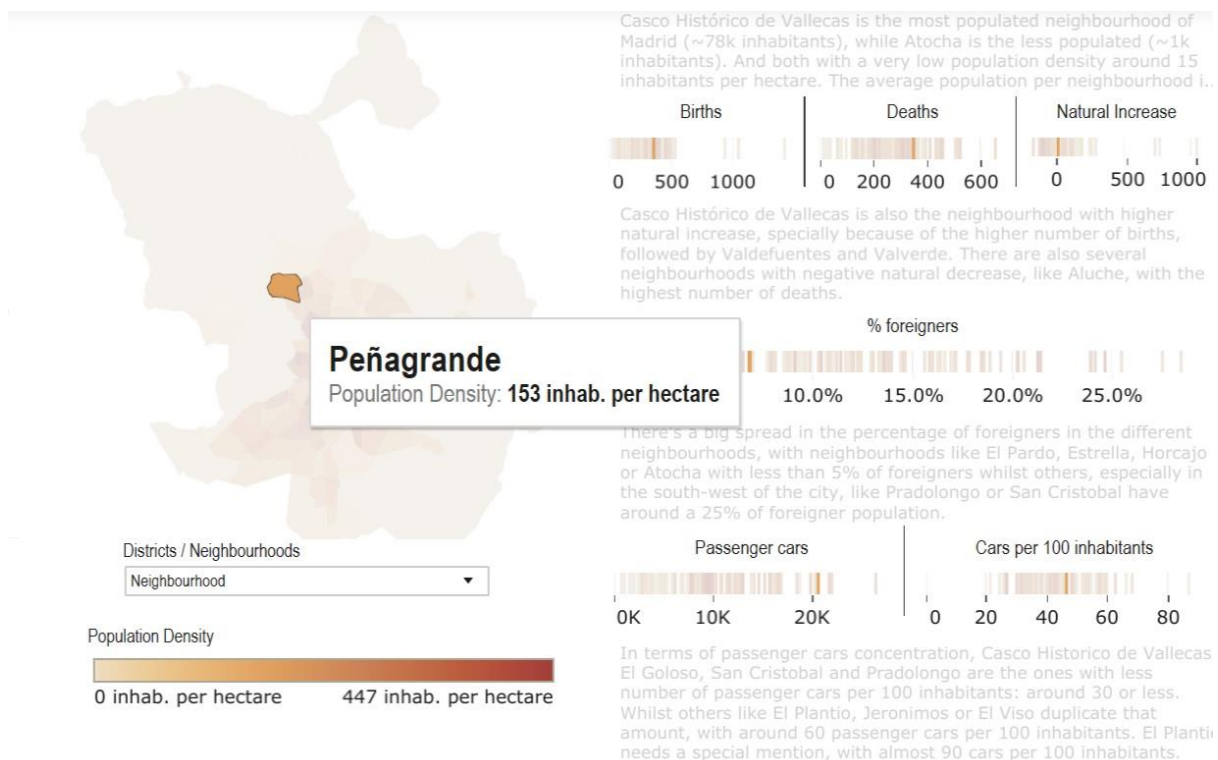

I like this graph , it shows the population pyramid in each side of Madrid city for example I clicked on Latina district and the data keep coming , the information about age and gender by percentage for example in Latina district the most population age is between 40 and 44 (4.1% female , 4.0% male) which is 4.3% in Madrid population .

This graph shows the relation between house prices and passenger cars ,for example I clicked on San Cristobal district and it shows that the are 140 people per hectare and the average of second hand house price is (925 euro for m2) and 25.14 is the average cars for every 100 people, It is impressive , and it shows the decrement from the highest population and price into the lowest.

Madrid city map , it is incredible work in this ! , too much details for Madrid city ! , it shows the number of population either if they are from Spanish or from outside Spanish ,it even showing the details where are they from! , how many births and deaths per year , how many districts and neighbourhoods , all the details that you might need.

And when I click I a specific neighbourhood it shows how many people in each hectare , there is a lot of details on it
